

## ESTONIA

Housing policies affect well-being through a wide range of channels including access to decent shelter, environmental quality, efficient use of scarce resources, type and extent of commuting, as well as its contribution to strong and resilient economic growth. This snapshot provides a cross-country perspective on Estonia's housing-related indicators and policy settings. Households' tenure choices depend on demographics and/or socio-economic factors, as well as policies related to public promotion of housing, housing taxation and rental regulations. There are large differences in tenure structure across OECD and key partner countries: homeownership in Estonia is higher than OECD average (Figure a). Real house prices have risen strongly across the OECD since the 1990s, with increases reaching up to 100% in some countries (Figure b). In Estonia, real house prices have sharply dropped during the Global Financial Crisis, but picked up in 2012. Estonia's housing investment rate has been quite volatile by comparison with other countries (Figure c). Finally, mortgage markets play a crucial role in household finances since housing generally constitutes household's single largest financial asset. The ratio of outstanding household mortgage claims to GDP in Estonia is relatively modest (Figure d).

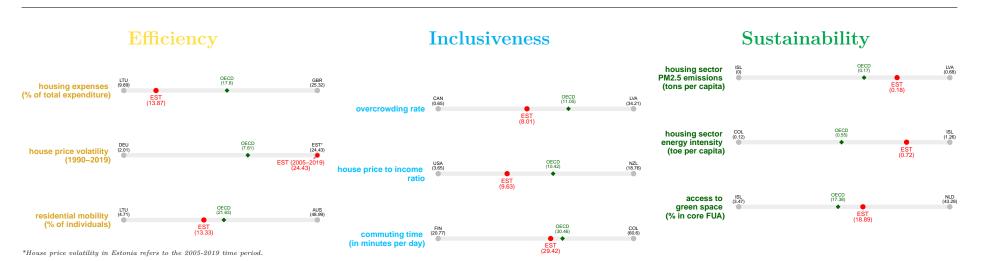

(b) Real house price index (2010=100)EST — OECD 175 100 75 50 25 0 2014 -

Efficiency measures the economy's capacity to align housing supply with demand, thereby limiting excessive price and rent increases, contributing to macroeconomic stability and facilitating residential mobility. In Estonia, housing costs, comprising actual and imputed rents as well as maintenance and repair of dwellings, make up a low share of overall household expenditure compared with the average OECD country. Conversely, historical house price volatility (computed over the 2005-2019 period) has been high in Estonia mainly driven by the instability experienced during the Great Financial Crisis, when abundant mortgage funding met insufficient levels of construction. Residential mobility, as measured by the percentage of individuals who changed residence in the years 2008-2012, is slightly below the average of OECD countries. Factors contributing to these outcomes include strong wage growth over the past decade, that kept housing affordable, and the concentration of Estonia's population and economic activity in Harju county, which comprises 40 percent of the overall population and contributes to 65 percent of GDP.

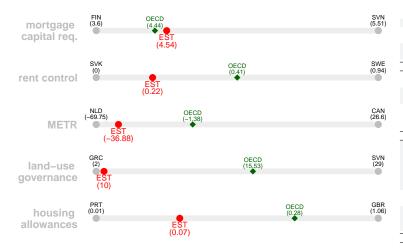

Inclusiveness refers to the housing sector's capacity to deliver adequate and affordable homes across the income distribution while limiting residential segregation. Estonia displays average overcrowding rate and it ranks relatively low in terms of house price to income ratios, measured by the years of disposable income equal to the price of a 100 square metres dwelling. Finally, average commuting time is in line with OECD average, which suggests that relatively many people can afford living close enough to their workplace. Sustainability assesses the housing sector's readiness for the transition to a low-carbon economy and its capacity to attenuate pressures on the ecosystem by preserving biodiversity and residents' health. Residential activities are responsible of 44 percent fine particulate matter (PM2.5) emissions on average across OECD countries, which is the air pollutant that poses the greatest risk to health globally. Estonia displays housingrelated PM2.5 emissions in line with OECD average and it displays high level of housing-related energy intensity. Factors contributing to these outcomes include the poor quality of the housing stock inherited by households after the privatization reform of the 1990's, and which requires sustained efforts for repair, renovation and greening. The Estonian Union of Cooperative Housing (EKUL) is playing a key role in this regard to provide training and seminars to achieve such objectives. Lastly, the average access to green space in urban areas, which is linked to a variety of health and well-being benefits, is relatively high by international comparison.

## **Policy Profile**

Housing policies shape the efficiency, inclusiveness and sustainability of the housing sector. The chart below shows the principal indicators capturing the policy profile for Estonia.

Requiring lenders to use more capital when funding risky mortgage loans has been found to result in lower crisis risk and stronger recoveries. More stringent rent control, which reduces the profitability of housing investment, is empirically associated with a weaker response of housing supply to change in demand. Higher marginal effective tax rates (METR) on housing property help containing house price dynamics, thereby contributing to housing affordability over the long run. Higher values of the land-use governance indicators reflect more decentralisation to the municipalities and/or more overlap across government levels; they have been empirically linked to housing supply that is less responsive to changes in demand. More spending on housing allowances typically facilitates residential mobility in some countries, which is often a condition for labour mobility. Higher rent subsidies can however inflate rents and prices where supply fails to respond flexibly to demand.

## ${\bf Definitions^*}$

	Structural indicators
Housing tenure	Arrangement under which the household occupies all or part of a housing unit. 2018 or latest year available. Source: OECD
	Affordable Housing database and Adva Center (2017); Gran Encuesta Integrada de Hogares (DANE, 2020) for Colombia; "Public Affordable Housing database and Adva Center (2017); Gran Encuesta Integrada de Hogares (DANE, 2020) for Colombia; "Public Affordable Housing database and Adva Center (2017); Gran Encuesta Integrada de Hogares (DANE, 2020) for Colombia; "Public Affordable Housing database and Adva Center (2017); Gran Encuesta Integrada de Hogares (DANE, 2020) for Colombia; "Public Affordable Hogares (DANE, 2020) for Colombia;
	Housing Option: Adva Center's Response to the Housing Crisis in Israel" for Israel. Notice that tenants renting at subsidized
	rent are lumped together with tenants renting at private rent in Australia, Canada, Chile, Denmark, Mexico, the Netherlands
	and the United States, and are not capturing the full extent of coverage in Sweden due to data limitations. For Colombia, dat
	on subsidized rents are missing, and the category "Other" includes usufruct, de facto occupancy and collective property. In the
	case of Israel ower outright and owner with mortgage are displayed together.
Real house price index	Real house (hedonic) prices evolution (100=2010). Source: OECD House Price Analytical Database
Housing finance	Loans for house purchasing, in percent of GDP (in %). 2020 or latest year available. Source: OECD Resilience database, National Bank of Belgium, Central Bank of Chile, DANE for Colombia, Central Bank of Ireland
Housing investment	Housing investment as share of GDP (%) (1990-2019). Source: OECD National accounts data, and Cuenta Nationales Anuales (DANE) for Colombia
	Efficiency
Housing expenses (% of total	Housing consumption as a share of total household expenditure (in %). The indicator includes expenditure for actual and
expenditure)	imputed rents, maintenance and repair of the dwelling. 2019 or latest year available. Source: OECD National accounts data
House price volatility (1990-2019)	Standard deviation of (de-trended) real house prices (1990-2019). Source: OECD calculations based on OECD Analytical House Price Database
Residential mobility (% of	Share of individuals that changed residence in 5 years (in %), 2012. Source: OECD Calculations based on 2012 EU SILC Data
individuals)	EU countries, AHS 2013 for the United States, HILDA 2012 for Australia, Encuesta de Calidad de Vida Urbana (ECVU) 2018
	Chile, Censo National de Población y Vivienda 2018 for Colombia
	Inclusiveness
Overcrowding rate	Share of household that does not have at its disposal a minimum number of rooms relative to their household size and
· · · · · · · · · · · · · · · · · · ·	composition (in %). 2018 or latest year available. The minimum number of rooms is equal to: one room for the household; one
	room per adult couple in the household; one room for each single person aged 18 and over; one room per pair of single persons
	the same sex between 12 and 17 years of age; one room for each single person between 12 and 17 years of age and not included
	the previous category; one room per pair of children under 12 years of age. Source: OECD Affordable Housing database. Data
	for Colombia comes from Censo National de Población y Vivienda 2018 - Metodologia Deficit Habitacional 2020
House price to income ratio	Years of disposable income equal to the price of a 100 square meter dwelling. 2016 or latest year available. The concept of
	income used is per capita gross disposable income of households. Source: HouseLev Dataset of Price Level Estimates, 2019
Commuting time (in minutes	Average time spent travelling to and from work or study for all 15-to-64-year-olds (in minutes per day). Latest available year,
per day)	ranging from 1999 (Portugal) to 2019 (USA). Source: OECD Family Database; Casen 2017 for Chile and DANE (Encuesta
	National de Calidad de Vida) 2019 for Colombia
	Sustainability
Housing sector pm2.5 emissions	Estimates of the annual volume of emissions of PM2.5 with respect to man-made emissions from non-industrial combustion
(tons per capita)	sources, in tons per capita. 2018 or latest available year. Source: OECD Environment database, 2019
Housing sector energy intensity	Residential energy consumption (in tonnes of oil equivalent per capita). 2019. Source: CO2 emissions from fuel combustion
(toe per capita)	database, IEA (2020) and World energy balance, IEA (2020)
Access to green space (% in	Share of green space area in core functional urban areas (in %). 2020. (The indicator is computed at FUA level and aggregate
core fua)	using the weighted average by FUA population in 2015). Source: OpenStreetMap and OECD calculations
	Policy indicators
Mortgage capital req.	Minimum regulatory Tier 1 ratio multiplied by unweighted average of risk weights for mortgage loans with an LTV ranging fro
	50 to 130. 2018 or latest year available. Source: ECB's Macroprudential Policies Evaluation Database (MaPPED) complement.
	by OECD own research
Rent control	Indicator reflecting on the number of regulations that restrict rent levels and rent increases. The indicator ranges between 0 a
	1, with a higher number indicating greater stringency. 2019. Source: OECD calculations based on OECD Questionnaire on Affordable and Social Housing (QuASH)
METR	The indicator combines information on property taxes and housing-related provisions of income taxes. It is computed as the
	difference between the pre-and post-tax rates of return of a marginal investment divided by the pre-tax rate of return of that
	investment where post-tax real rate is the minimum rate of return necessary to make the investment worthwhile (in %). 2016.
